

Mezzanine Designer

NEW: Multi-tier design!

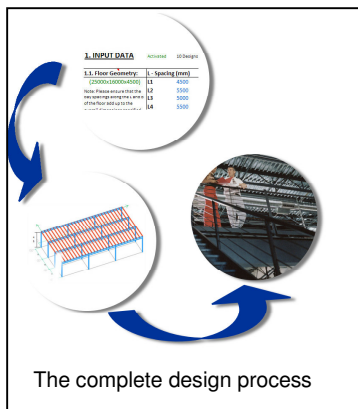

Mezzanines in Minutes

www.multisuite-solutions.com

A complete quotation, design and fabrication package in one. This new approach to mezzanine production covers the full work stream from initial survey to final production drawings.

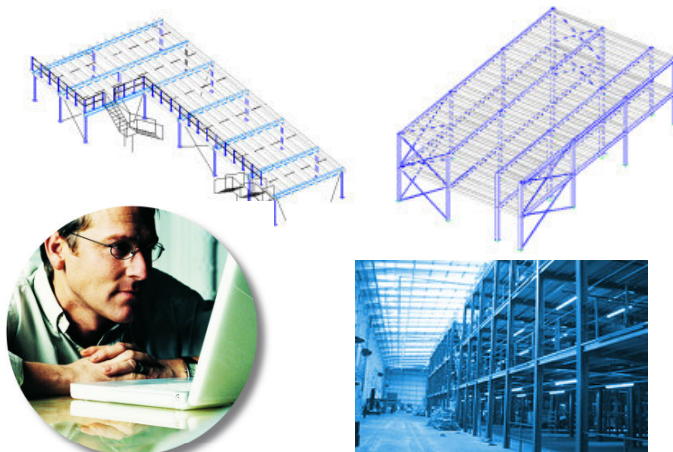

The latest release of the Mezzanine Designer software enables almost instant quotes and layout generation for both single and multiple tier mezzanine floors. Quickly go from survey data, loading requirements and basic floor geometry, and produce member sizes including base-plates and bracing, to a full quotation and preliminary sales drawing in a matter of minutes. It is very easy to try a number of alternative configurations to see how that affects structural calculations, quantities and pricing.

Create detailed designs, and an accurate 3D model of your floor instantly in AutoCAD® using MultiSTEEL. From this generate accurate arrangement and fabrication drawings for all of the members with full structural calculations.

Options:

- Design and Pricing Module Only.
- The above plus the MultiSTEEL application for use on existing AutoCAD®.
- Full Design, Pricing and Detailing Suite with AutoCAD® 2010 OEM technology built in.
- Stand alone and Networkable versions
- System is installed fully configured to your detailing standards.

Instant Design Calculations, Accurate Costs & Fast Drawing Production

Quickly explore design options and pricing implications. Minimise drafting and repetitive detailing through design integration and extensive macros, for connections, stairs, and handrailing.

Advantages of an Integrated Approach

Mezzanine Designer integrates all the elements of the structural calculations, material quantities and pricing into a single, optimised approach.

In other words, any changes to the geometry, loading or design criteria such as allowable deflection, is immediately reflected in all calculations and quantities, and you instantly know whether your chosen sections, base-plates, bracing, etc are still viable. The system gives a Pass or Fail status to all elements in the floor.

For this reason any configuration of floor can be evaluated in minutes and a truly optimised design selected.

Key Features

- Modular, to suit your requirements
- Easily customisable using drawing based libraries
- Easy to learn and use
- Full configuration & training at your offices
- Enhanced support team with 10 years' experience of supplying mezzanine software
- Fully supports all AutoCAD® 2010 & 2011 platforms
